

Step 1 – Create a trading account.

Create a trading account with our chosen broker, BDSwiss. This is a fully regulated firm and we have had a long lasting partnership with them. This is where you will manage your funds, you will also need to upload personal documents to verify your trading account.

You will need to deposit into an MT4 account, you will then be given your MT4 account number, server and the password is the same as the one you set up your BDSwiss account with.

Create an account here:

<https://dashboard-group.bdswiss.com/register/?campaign=1341&p1=&p2=5954&p3=3d3a9l0y>

Step 2 – Create an F.X.A Technologies account.

This is where you will connect your BDSwiss MT4 account to our algorithms. You can choose which algorithm to follow based upon your risk appetite. We recommend the steady growth one as it is less risky and drawdowns are minimal.

Create an account here:

<https://www.fxatechnologies-platform.com/register>

Step 3 – connecting to the algorithm.

To connect to the algorithm please ensure you follow all the steps in the video on the website. If you have any questions please contact us. We can also check if you are fully connected our side to give you reassurance.

www.fxatechnologies.com

Notes:

Once you are fully connected, we recommend you do not trade your account manually. You can also download the MetaTrader 4 mobile app, this will make it easier to check the progress of your account.

You can also choose your risk settings in the F.X.A technologies platform under “risk multiplier”. Please do not go over 1 on this. If you would like to minimise the risk you can half it by inputting 0.5 etc.

You will be charged 20% per month on the algorithms. Please note the 20% will not come straight out of your trading account as we do not have direct access to your personal funds. You will be required to pay the 20% performance fee via Paypal.
